- A. automate processes by using non-human tasks
- B. add a level of sophistication to the process model
- C. improve the process by solving problematic tasks
- D. make sure metrics relating to process cycle times are met

Answer: D

Question No : 3

After a simple split, the process will end when the first token encounters an End event.

- A. True
- B. False

Answer: B

Question No : 4

IBM BPM Blueprint can generate which types of documentation for a Process Map and Diagram?

- A. Word document
- B. Excel document
- C. PDF document
- D. PowerPoint document
- E. HTML document

Answer: A,B,C,D

Question No : 5

The developer creates a complex type to represent personal information and needs to include phone numbers. The developer must include cell, home and work numbers. In this situation, why would the developer create a list of another complex structure type?

- A. People have varying amounts of phone numbers and you don't want a lot of empty variables.
- B. The developer does not have to change the data structure to add additional phone numbers later.
- C. There are no advantages to structuring data this way. It just depends on your database structure.
- D. None of the above

Answer: A,B

Question No : 6

The developer wants to build a service that does not use business rules or integrations, but that generates some CSS for a Coach. What Service will the developer use?

- A. Ajax Services
- B. Rule Services
- C. Human Services
- D. Integration Services
- E. General System Services

Answer: E

Question No : 7

If two different message events are attached to the same UCA, selecting Consume Message on each of them will ensure that the message is only picked up once.

- A. True
- B. False

Answer: B

Question No : 8

A routing policy defined on the WebSphere Lombardi Edition Routing Tab of an Activity can be used to assign a task to a specific group or user.

- A. True
- B. False

Answer: A

Question No : 9

- E. The input and output variables of a Background UCA Service must match.

Answer: A,B

Question No : 16

Refer to the Exhibit. What business rule might the first condition in the Rule Script below represent?

	salaryAmount	qualificationLevel	Action Requirement
1	{ 30000.00 .. 50000.00 }	{ "minimally", "moderately" }	Approval automatic
2	< 80000.00	"adequately"	Approval automatic
3	-	-	Approval required
4			

- A. If a candidate's salary is 30,000 or 50,000 AND the candidate is minimally or moderately qualified, then automatically approve the job offer.
- B. If a candidate's salary is between 30,000 to 50,000 AND the candidate is minimally or moderately qualified, then automatically approve the job offer.
- C. If a candidate's salary is between 30,000 to 50,000 OR the candidate is minimally or

moderately qualified, then automatically approve the job offer.

D. If a candidate's salary is 30,000 or 50,000 OR the candidate is minimally or moderately qualified, then automatically approve the job offer.

Answer: B

Question No : 17

If the activity "Rework" in a process is performed by both "Reworkers" and "Assembly Operators", then:

A. create a separate process for each and link the process back to the higher level process.

B. duplicate the activity in both the Reworker swimlane and in the Assembly Operator swimlane.

C. use a nested process in order to create two participant swimlanes for that activity and then assign the task to the first available participant.

D. choose the group that is ultimately responsible for the rework and if both parties are responsible, then create a swimlane that includes both participants.

Answer: D

Question No : 18

Based on Blueprint best practices, how does the decomposing a process begin?

A. Mapping out the expected path (happy path) of the process first.

B. Mapping out the expected path (happy path) and a few other exception paths alongside.

C. Mapping out all the paths simultaneously so that that the subject matter experts do not lose the train of thought.

D. Mapping out the exceptions first because mapping out the expected path (happy path) is easy and can be done any time.

Answer: A

Question No : 19

Using our suggested naming convention, how should the following variable and variable
