- B. In Domino Designer, File - Database - Design Synopsis
- C. In Domino Designer, Design - Design Properties - Shared Column Use
- D. In Domino Designer, Shared Columns - Who is using this Shared Column

**Answer: D**

**Question No : 10 - (Topic 0)**

Tom needs to add a form alias named frmInvoice to his Invoice form design element. How can he add this information to the form design?

- A. Add the alias in the Alias field in the Form Properties dialog box.
- B. On the Object tab in the Programmer's pane, select Alias and add the form alias.
- C. Select the Invoice form in the Domino Designer client and click in the Alias column to edit the alias.
- D. Delete the existing form and recreate it, specifying the alias name when the form is initially created.

**Answer: C**

**Question No : 11 - (Topic 0)**

Tony has created a Shared Column to display the processing status of an order. The target views for the Shared Column do not share a common display format. Can Tony still use a Shared Column in his views?

- A. No, because Shared Columns must all use the same format.
- B. Yes, but the column display format will not match the rest of the view.
- C. Yes, by selecting "Use Formula Only" when adding the Shared Column to the view.
- D. No, because Shared Columns automatically use the format of the previous field column.

**Answer: C**

**Question No : 12 - (Topic 0)**

Chaz has a number of action buttons in the action bar of his view. The action buttons are already using all the available space in the action bar, and he must add five more options. What is an alternate method Chaz can use to make those options available to the user?

- A. Remove the icons from the Action buttons.
- B. Set the Action buttons to "Compress to fit".
- C. Set the Action Bar Display Height to "Double".
- D. Set the Action button to "Include in right mouse button menu".

**Answer: D**

**Question No : 13 - (Topic 0)**
