**TS: Microsoft Project Server 2010,  
Configuring**

Version 90.4

70-177

**QUESTION NO: 1**

You have a Project Server 2010 environment with two servers. Server1 is running SQL Server 2008 and Server2 is running SharePoint Server 2010. Project Server 2010 is installed on Server2. You need to configure your Project Server 2010 environment to allow Project Web App (PWA) to build OLAP cubes. What should you do on Server2?

- A. Create two groups, one named Report Authors and one named Report Viewers.
- B. Install the SQL Server 2008 Native Client and Analysis Management Objects.
- C. Start Excel Services and configure trusted data connections.
- D. Set up trusted data connection libraries for external data.

**Answer: B****QUESTION NO: 2**

You have a Project Server 2010 environment with Microsoft SQL Server 2008 Analysis Services installed. You need to enable Project Server reporting. You start the Excel Services Web Service Application. Which application should you start next?

- A. Business Data Connectivity Service
- B. Secure Store Service
- C. Security Token Service
- D. Access Services Web Service

**Answer: B****QUESTION NO: 3**

You are installing Project Server 2010 on a Windows Server 2008 server. During the installation, you receive an error message that says that your server is missing software prerequisites. You need to acquire all missing components. What should you do?

- A. Run the psconfig.exe –cmd evalprovision command.
- B. Use the PSCOMPlus.exe command.
- C. Use the Windows Server 2008 SetTracing utility.
- D. Use the SharePoint 2010 Products Preparation Tool.

**Answer: D****QUESTION NO: 4**

You are configuring Microsoft SQL Server 2008 Analysis Services for a Project Server 2010 environment. You need to ensure that SQL Server 2008 Analysis Services is configured for building Project Server 2010 cubes. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

**70-177**

- A. Configure SQL Server network settings to enable remote connections.
- B. Add the Farm Administrator account to the OLAP users local group.
- C. Configure the Farm Administrators account to have administrative permissions in SQL Server Analysis Services.
- D. Create a SQL Server login for the Farm Administrator domain account and give it the required server roles.

**Answer:** B, C

**QUESTION NO: 5**

You are installing Project Server 2010 in a multiserver environment. You need to perform the necessary steps to complete the installation. What should you do first?

- A. Install SharePoint Server 2010.
- B. Install Project Server 2010.
- C. Install SQL Server Analysis Services.
- D. Install SQL Server.

**Answer:** D

**QUESTION NO: 6**

You are installing Project Server 2010. The Microsoft SQL Server database is located on a separate server. You need to configure the database to support remote users. What should you do?

- A. Configure local and remote connections to use named pipes.
- B. Configure local and remote connections to use TCP/IP.
- C. Enable the SQL Server Browser service.
- D. Enable SQL Server Agent for remote users.

**Answer:** B

**QUESTION NO: 7**

You have a Project Server 2010 environment configured with default settings. You need to provision a new Project Web App (PWA) instance that is a copy of the current environment. What should you do?

- A. Use the Project Server service application in SharePoint Central Administration and provide the names of the databases to be used.
- B. Use the Project Server service application in SharePoint Central Administration and use the default database names.
- C. Extend the Project Web App (PWA) Web application to a new host header.
- D. Create a new site collection in SharePoint Central Administration.
