Question No : 6

Assume there are multiple publish instances (publ,pub2 and pub3) serving requests for an online shopping site. The end user is allowed to provide reviews and comments for each product and about their shopping experience. The Dispatcher module is in place to load balance the requests to publish instances and there is only one author instance, named author, where content editors create the pages. When a user, named User A, provides comments and the request being served by publish Instance publ, in which three ways are these comments replicated to pub2 and pub3? (Choose three.)

A. Configure the dispatcher flush for the author pointing to a webserver uri on which the Dispatcheris deployed and configured.

B. Configure replication agents for the author pointing to publ, pub2 and pub3.

C. Configure reverse replication agents for the author pointing to publ, pub2 and pub3.

D. Configure a static agent for the author.

Answer: A,C,D
