## Exam C2150-201

### Fundamentals of Applying IBM Security Systems Identity and Access Assurance

Version: 6.0

[ Total Questions: 65 ]

**Question No : 1**

A customer has a requirement which is currently unavailable in an out-of-the-box product.

Who would be able to assist in troubleshooting the customer when developing a custom solution?

- A. IBM Sales
- B. IBM Support
- C. IBM LAB Services
- D. Raise an enhancement request with IBM

**Answer: C**

**Question No : 2**

A customer's IT infrastructure includes ten different directories, one for each country branch. The customer now needs a single directory for some centralized applications. The customer would like to make as few changes in the environment as possible.

Which product do you recommend?

- A. IBM Security Identity Manager
- B. IBM Security Directory Server
- C. IBM Security Directory Integrator
- D. IBM Security Access Manager for Web

**Answer: C**

**Question No : 3**

A company is planning to design an identity and access management solution across multiple data centers which will automate the user life cycle management and streamline their access management process.

Which two key design principles should be factored in for designing a comprehensive identity and access management solution? (Choose two.)

- A. Design for integrity
- B. Design with single zone
- C. Design for accountability
- D. Design for single layer of defense
- E. Design for single data center and then extend it

**Answer: C,D**

**Question No : 4**

Which scenario is typical for onboarding a new web application into IBM Security Access Manager for Enterprise Single Sign-On?

- A. Use AccessStudio to create a profile in the test environment. Confirm the profile works and use it directly in the production environment.
- B. Create a junction configuration in the test environment, confirm successful authentication, export configuration from test import into production environment.
- C. Use AccessStudio directly in production environment to create a new application profile, confirm by using the test functionality in AccessStudio, and upload new application profile to production IMS server.
- D. Use AccessStudio to create a new application profile. Add a condition so the profile is only available to your test users. After confirmation of the test users, remove the condition to enable the profile for all users in the production environment.

**Answer: D**

**Question No : 5**

A company is using IBM Security Access Manager and wants to extend the functionality of the help desk users so that they can assist the end user in troubleshooting and diagnostics.

Which WebSEAL functionality is used to allow help desk users to assume the identity of the user who is a member of the Security Access Manager Domain?

- A. Switch User function
- B. Switch Admin function
- C. Transfer User function
- D. Switch Application function

**Answer: A**

**Question No : 6**

A company is using IBM Security Access Manager for Web solution for all applications.

What is the business advantage of this solution?

- A. Identity management of different systems
- B. Focus of all Web traffic through a single path
- C. Compromise of the Internet-facing firewall results in limited security exposure.
- D. Reduced cost by moving substantial amounts of Web infrastructure back into their internal networks

**Answer: C**

**Question No : 7**

A company wants full visibility into network, application, and user activity events. It wants to monitor events and logs captured from various devices.

Which additional benefit will this company get after deploying the IBM Security QRadar solution?

- A. Directory integration
- B. Secured Web applications
- C. Management of user identities
- D. Rich compliance-reporting capabilities

**Answer: D**

**Question No : 8**

A customer is not allowing the usage of self-signed certificates in its production environment. The customer has its own Public Key Infrastructure (PKI), and all certificates should be issued by this Certification Authority using their internal processes.

What needs to be done when going into production with the IBM Security products from the Identity and Access Assurance software bundle?

- A.** Configure all security components to use the PKI from the customer. Required certificates will automatically be generated and trusted during installation.
- B.** Use the IBM keytool to reconfigure all communication channels to use one single certificate issued by the Certification Authority of the Customer. Put the Certification Authority certificate in the truststore of the keytool.
- C.** Identify all communication channels using SSL, and create Certificate Signing Requests for them. After receiving the certificates, configure all secure communication channels to use these certificates, and install the Certification Authority certificate in the truststore of all involved components.
- D.** Identify all communication channels using SSL, and extract the involved self-signed certificates. Submit these to the Certification Authority of the customer to be cross-signed. Reconfigure the communication channels to use these new certificates and put the Certification Authority certificate in the truststore of all involved components.

**Answer: B**

**Question No : 9**

A health care facility requires its physicians and staff to complete certain courses offered through its learning management system, prior to getting accounts and access in its patient management application.

Which functional requirement aligns with this business requirement?

- A.** Accounts in the patient management system must be manually provisioned by Service Desk.
- B.** Physicians and staff must complete required training courses prior to being allowed to login to the network.
- C.** The learning management system must also support provisioning functions, in order to meet this business requirement.
- D.** During onboarding, physicians and staff must be granted login to the network and the learning management system in order to access the required courses.

**Answer: D**

**Question No : 10**
