- A. User Role
- B. Help Desk Role
- C. Administrator Role
- D. Directory Administrator Role

Answer: C

Question No : 16

When making a backup of the IMS Server, which tool will back up this information?

JDBC settings

All IMS Server keys and certificates

IBM WebSphere Application Server root CA key

- A. Export IMS Configuration Tool
- B. IHS WebAdmin Configuration Tool
- C. IBM DB2 ControlCenter Backup imsdB Tool
- D. IBM WebSphere manage profiles -backupprofile Tool

Answer: A

Question No : 17

How is the AccessAgent log level increased?

- A. Modify the setuphp.ini file

- B. Set the log detail in the AccessAgent wallet manager to High
- C. Increase the log level detail in IBM WebSphere Application Server
- D. Increase the value of HKEY_LOCAL_MACHINE\SOFTWARE\IBMSAM\SSO\DeploymentOptions\Loglevel

Answer: D

Question No : 18

In which case is setting the policy priority useful?

- A. When a policy is defined for two scopes
- B. When the AccessAgent version is lower than V8.0
- C. When a Helpdesk officer needs to override the system policy set by an administrator
- D. When a user needs to view policy information that can only be accessed by an administrator

Answer: A

Question No : 19

The MS Server is configured to use Active Directory as the enterprise directory and password sync is enabled. What is required in order to sign up from a workstation with AccessAgent?

- A. The IMS Server is on the domain
- B. The workstations on the domain
- C. The user has administrator privileges on the workstation
- D. The user has logged onto the workstation at least one time before the AccessAgent was installed

Answer: B

Question No : 20

Which strong authentication mechanism requires IBM Security Access Manager for Enterprise Single Sign-On to be deployed in a stand alone or cluster installation of the IMS Server?

- A. Smart Card
- B. Active REID
- C. VascoOTP
- D. Hybrid Smart Card

Answer: C

Question No : 21

What is part of the default behavior when switching users on a shared desktop in IBM Security Access Manager for Enterprise Single Sign-On V8.2 (ISAM ESSO)?

- A. When switching from User A to User B, User B logs in via the Windows GINA.
- B. After switching from User A to User B, all previously open applications are closed.
- C. After switching from User A to User B, any application left open by User A remains open for User B.
- D. When switching from User A to User B, User B logs in via the ESSO GINA (XP) or ESSO credential provider (Windows 7 and Vista).

Answer: C

Question No : 22

The customer wants a system that provides an individual workstation session running in a shared workstation system in order to protect data loss in the individual session for the users. Which session management policy should be used to meet this requirement?

- A. Private Desktop Policy
- B. Shared Desktop Policy
- C. Personal Desktop Policy
- D. Authentication Service Policy

Answer: A

Question No : 23

What does the deployment option `SystemSyncToleranceSecs` control?
