

Symantec ST0-149

**Storage Foundation and HA 6.0 Windows Technical
Assessment
Version: 4.0**

QUESTION NO: 1

Which two system components are verified during a pre-installation check for Veritas Storage Foundation and High Availability Solutions 6.0 for Windows? (Select two.)

- A. shared disk storage compatibility
- B. total physical memory
- C. aggregate CPU performance
- D. Active Directory
- E. available installation disk space

Answer: B,E

Explanation:

QUESTION NO: 2

What is the minimum permission required to install Veritas Storage Foundation and High Availability Solutions 6.0 for Windows?

- A. Domain Administrator
- B. Local Administrator
- C. Domain Operator
- D. Local User

Answer: B

Explanation:

QUESTION NO: 3

What is the default load balancing setting for the Dynamic Multi-Pathing (DMP) Active/Active mode?

- A. Balanced Path
- B. Round-robin
- C. Weighted Paths
- D. Least Blocks

Answer: C

Explanation:

QUESTION NO: 4

Which feature is used to improve initial mirror synchronization time?

- A. FastResync
- B. SmartSnap
- C. FastSync
- D. SmartMove

Answer: D

Explanation:

QUESTION NO: 5

What are the two site-based allocations for the site-aware allocation feature? (Select two.)

- A. site-separated allocation
- B. site-based allocation
- C. site-specific allocation
- D. site-confined allocation
- E. site-campus allocation

Answer: A,D

Explanation:

QUESTION NO: 6

Which utility is used to back up the private region?

- A. vxcbr
- B. vxsnap
- C. vxassist
- D. vxdg

Answer: A

Explanation:

QUESTION NO: 7

Which feature is available when Veritas Cluster Server (VCS) is configured in secure mode?

- A. SSL to encrypt communication between cluster nodes
- B. a single sign-on mechanism to connect to a cluster
- C. an isolated and secure environment for running applications
- D. root broker configured in a stand-alone system outside cluster

Answer: B

Explanation:

QUESTION NO: 8

What is the recommended number of NICs per system to configure a two node cluster?

- A. 2
- B. 3
- C. 4
- D. 5

Answer: B

Explanation:

QUESTION NO: 9

Which utility is used to determine whether a network adapter maintains its connection status in a system-defined variable?

- A. getmac
- B. getcomms
- C. NICTest
- D. ping

Answer: C

Explanation:

QUESTION NO: 10

Which process enables the renaming of an imported dynamic disk group named DGName in Veritas Enterprise Administrator?

- A. right-click on disk group object DGName, select rename Dynamic Disk Group, enter new name
- B. select disk group object DGName, press F2, enter new name
- C. right-click on disk object DGName, select Deport Dynamic Disk Group, enter new name
- D. select disk group object DGName, select Import Dynamic Disk Group, enter new name

Answer: A

Explanation:

QUESTION NO: 11

Which MountV resource attribute should be set to reduce failover time?

- A. AutoFSClean
- B. CheckFSAccess
- C. PurgeStaleMountPoints
- D. ForceUnmount

Answer: D

Explanation:

QUESTION NO: 12

Solutions for which application are available in the Storage Foundation - High Availability Solution Configuration Center?

- A. Microsoft Hyper-V
- B. Symantec Enterprise Vault
- C. Symantec NetBackup
- D. VMware vSphere

Answer: B

Explanation:

QUESTION NO: 13

Which benefit specific to Campus clusters does Veritas Storage Foundation 6.0 for Windows offer?

- A. storage live migration
- B. extended attributes
- C. replicated data
- D. site aware allocation

Answer: D

Explanation:

QUESTION NO: 14

Which agent is used to configure high availability for a cluster aware application service if a specific Veritas Cluster Server (VCS) agent is unavailable?

- A. Proxy agent
- B. GenericService agent
- C. Process agent
- D. ServiceMonitor agent

Answer: B

Explanation:

QUESTION NO: 15

Which command is used to validate recent changes made to the cluster configuration?

- A. hasys -verify
- B. haconf -verify
- C. hacf -verify
- D. hastatus-verify

Answer: C

Explanation:

QUESTION NO: 16

What is the minimum amount of memory required to make Microsoft Hyper-V virtual machines highly available with Veritas Storage Foundation and High Availability Solutions 6.0 for Windows?

- A. 2GB
- B. 3GB
- C. 4GB
- D. 8GB

Answer: C

Explanation:

QUESTION NO: 17

An application is under maintenance for a application update on Server2. The application administrator wants Veritas Cluster Server (VCS) to keep the application running on Server2, but fault the service group and resource if a resource faults. Which service group attribute can accomplish this?

- A. Priority
- B. Evacuate
- C. Frozen
- D. Load

Answer: C

Explanation:

QUESTION NO: 18

Which disk group type is required for Veritas Storage Foundation for Windows to work with a Microsoft Failover Cluster?

- A. Cluster Dynamic disk group
- B. Private Dynamic disk group
- C. Secondary Dynamic disk group
- D. Primary Dynamic disk group

Answer: A

Explanation:

QUESTION NO: 19

An administrator is designing a cluster in a Microsoft Windows environment with three systems. Two of the systems are on the 192.168.4.0 Class C public network. The third system is on the 192.169.0.0 Class B public network. The administrator needs to have Microsoft Windows clients access the service groups independent of the system on which they are running. Which feature or change must be incorporated into the design?

- A. use the Lanman resource in each service group
- B. change the servers so they all reside on the same subnet
- C. change the servers so they all use the same subnet class
- D. use the subnet resource in each service group

Answer: A

Explanation:

QUESTION NO: 20

What are two different ways to perform an upgrade for a Veritas cluster? (Select two.)

- A. parallel upgrade
- B. offline upgrade
- C. online upgrade
- D. rolling upgrade
- E. tiered upgrade

Answer: A,D

Explanation:

QUESTION NO: 21

A service group is in a fully online state. What will occur if an administrator temporarily freezes the group and a resource faults?

- A. The resource enters a faulted state and the group enters a partial state.
- B. The resource enters a partial state and the group attempts to fail over.
- C. The resource enters a partial state and the group enters a partial state.
- D. The resource enters a faulted state and the group attempts to fail over.

Answer: A

Explanation:**QUESTION NO: 22**

An administrator notices that a disk in a disk group is tagged as Foreign. In which disk group is the Foreign disk located?

- A. Dynamic disk group
- B. Private disk group
- C. Unknown disk group
- D. Basic disk group

Answer: C**Explanation:****QUESTION NO: 23**

An administrator notices that the Veritas Cluster Server (VCS) sends SNMP notification about monitor timeouts only for the first monitor timeout. To tune SNMP notification, the administrator changes the AlertOnMonitorTimeOut from its default value of 0 to 5. What will be the effect of this change?

- A. VCS sends SNMP notification at fifth monitor timeout.
- B. VCS sends SNMP notification at each fifth consecutive monitor timeouts.
- C. VCS sends SNMP notification at the first five consecutive monitor timeouts.
- D. VCS sends SNMP notification at the first and each fifth consecutive monitor timeouts.

Answer: D**Explanation:****QUESTION NO: 24**

Which benefit does Veritas Storage Foundation for Windows bring to stand-alone server environments that share storage between multiple hosts?

- A. Private disk groups
- B. Multiple disk groups
- C. Primary disk groups

D. Foreign disk groups

Answer: A

Explanation:

QUESTION NO: 25

Which wizard is used to move data or volumes to disks that have improved performance?

- A. Volume Migration Wizard
- B. Disk Migration Wizard
- C. Data Migration Wizard
- D. Storage Migration Wizard

Answer: D

Explanation:

QUESTION NO: 26

A service group is online with values for both Frozen and TFrozen set to 0. A child resource faults and Veritas Cluster Server (VCS) fails to bring down the configured parent resources. Which default attribute value should be investigated?

- A. FaultPropagation
- B. ManageFaults
- C. Critical
- D. ToleranceLimit

Answer: A

Explanation:

QUESTION NO: 27

A Dynamic disk group import fails and a message is displayed indicating that it is marked as in-use by another node. Which action will resolve the situation?

- A. confirm that it is a resource in a cluster and import it with the 'Import as cluster disk group' option checked
