Veeam

Exam VMCE_V8

Veeam Certified Engineer v8

Version: 7.0

[Total Questions: 150]

CERTKILL

Question No : 1

Which prerequisite is necessary in order to complete a configuration restore?

A. Veeam Backup Enterprice Manager is installed.
B. None of the jobs are targeting the repository where the configuration backup is located.
C. All Veeam Backup & Replication jobs are stopped.
D. None of the above.

Answer: C

Question No : 2

What effect will changing the deduplication settings for a backup job have?

A. New deduplication settings are not applied until an active full backup has been performed. Previously created backup files are re-processed.
B. New deduplication settings are applied at the next run of the job. Previously created backup files are re-processed.
C. New deduplication settings are applied at the next run of the job. Previously created backup files are not affected.
D. It is not possible to change deduplication level after first backup has been run.
E. New deduplication settings are not applied until an active full backup has been performed. Previously created backup files are not affected.

Answer: B

Question No : 3

During the SureBackup job execution, redo logs are created for each verified VM. Where are the redo logs for the job located?

A. In a special folder of the Backup & Replication server
B. In the backup file itself
C. On the datastore specified in SureBackup job settings
D. On the backup repository
E. On the datastore specified in Virtual Lab settings

Answer: C

Which Veeam Backup & Replication feature or component is able to utilize SQL transaction log backups for point-in-time restore?

A. Veeam Explorer for Microsoft SQL
B. Entire VM Restore
C. U-AIR Microsoft SQL Recovery wizard
D. Instant Recovery

Answer: A

Which of these statements regarding Replica failover/failback are true?

A. After committing failback, the failback protective snapshot that saves the pre-failback state of a VM replica is deleted.
B. After committing failback, replication activities for the VM which you failed back are NOT resumed automatically.
C. When you undo failover, the VM replica is reverted to its pre-failover state, powered off and all changes that have taken place since the VM replica was powered on are deleted.
D. After undoing failover has completed, you will need to reconfigure the replica job before it will start again.
E. It is only possible to failover one VM at a time.

Answer: B,D

Which of the following describes Veeam Data Mover Service function most accurately? (Choose the 2 appropriate options)

A. Analyzes the system,installs and upgrades necessary components and services depending on the role selected for the server
B. Deploys and coordinates executable modules that perform mainjob activities on behalf of Veeam Backup & Replication
C. Performs data compression, deduplication and data transfer
D. Communicates with the VSS framework during backup, replication and other jobs, and performing recovery tasks

Answer: A,D

Question No : 7

Can Universal Application-Item Recovery (U-AIR) be performed in the absence of a Virtual Lab?

A. Yes. if the proper infrastructure is configured.
B. No, a Virtual Lab is always required.
C. Yes, but only with a configured application group.

Answer: B

Question No : 8

Which statements regarding Veeam Backup & Replication tape support are true? (Select two.)

A. The VTF (Veeam Tape Format) proprietary format is used to write date to tape.
B. The MTF (Microsoft Tape Format) industry format is used to write date to tape.
C. Restoring a VM from tape requires first restoring the entire backup job to disk.
D. It is not possible to recover individual files/folders from tape.
E. It is possible to recover individual files/folders from tape.

Answer: B,C

CERTKILL

Question No : 9

Which is the most often you can schedule a replication job?

A. Every hour
B. Every 15 minutes
C. Every 5 minutes
D. Every 20 secounds
E. Continuously

Answer: E

Question No : 10

Veeam Backup & Replication establishes the stabilization point during SureBackup verification according to which of the following algorithms? (Choose the 3 appropriate options.)

A. Stabilization by Maximum allowed boot time
B. Stabilization by heartbeat
C. Stabilization by resource allocation
D. Stabilization by application test
E. Stabilization by IP
F. Stabilization by ping test

Answer: A,B,E

Question No : 11

Which can be used if the user key for an encrypted backup is forgotten or lost?

A. Veeam ONE
B. The user must request a meta key from support.
C. There is no way to restore the data in this case.
D. Veeam Backup Enterprise Manager

Answer: D

Question No : 12

What effect will changing the compressing settings for a backup job have?

A. New compression settings are applied at the next run of the job. Previously created backup files are not affected.
B. New compression settings are not applied until an active full backup has been performed. Previously created backup files are re-processed.
C. New compression settings are applied at the next run of the job. Previously created backup files are re-processed.
D. It is not possible to change compression level after first backup has been run.
E. New compression settings are not applied until an active full backup has been performed. Previously created backup files are not affected.

(changing data compression settings)

Question No : 13

Which of the following allows for installation of the Veeam plug-in for vSphere Web Client?

A. Veeam ONE Monitor
B. Veeam Backup & Replication
C. Veeam Backup Enterprise Manager

Answer: C

Question No : 14

With which version(s) is it possible to perform backup recovery verification?

A. Standard

B. All editions

C. Enterprise Plus

D. Enterprise and Enterprise Plus

E. Free

Answer: B

Reference: http://helpcenter.veeam.com/backup/80/vsphere/surebackup_manual.html

Question No : 15

Which editions of Veeam Backup & Replication include Backup from Storage Snapshots?

A. Standard, Enterprise and Enterprise Plus Edition for Vmware

B. All Enterprise Plus Editions

C. Enterprise Plus Editions for Vmware only

D. Enterprise Plus Editions for Hyper-V only

E. Standard, Enterprise and Enterprise Plus Edition for Hyper-V

Answer: C

Question No : 16

Is it possible lo switch between backup methods when creating regular backup files?

A. Yes, the new method willtransform all existing backups in the appropriate way and continue creating backupsin the same backuprepository.

B. Yes, in this case you will have to specify a new backup repository.

C. Yes, the new method leaves existing backups as they are and continues creating backups in the same backup repository.

D. No, if you want to create backups using another method, you have to create another backupjob.

Answer: C

CERTKILL

Question No : 17

Which of the following bulit-in predefined tests can be performed to verify a VM replica which is started in the Virtual Lab? (Choose the 3 appropriate options.)

A. Hard drive test
B. CRC check
C. Ping test
D. Application test
E. Heartbeat test
F. Memory test

Answer: C,D,E

Question No : 18

Which procedure is an option to finalize replica failback?

A. Quick Migration
B. Replica fallback does not need to be finalized.
C. Commit Fallback
D. VMware Storage vMotion
E. Permanent Fallback

Answer: E

Question No : 19

Under certain circumstances. VMware Change Block Tracking (CBT) may be unavailable to Veeam Backup & Replication. What effect will a lack of CBT information have on the Veeam backup job?

A. Veeam will perform a full backup automatically
B. You will not be able to later copy this file to tape or offsite
C. The backup job will fail

D. The backupjob duration will increase

Answer: C

Question No : 20

It was decided to set up Veeam Backup & Replication to ensure parallel tasks do not impact production storage availability. Which parameters should be adjusted in the I/O Control section of the menu to do this? (Choose the 2 appropriate options.)

A. Turn off parallel processing at:
B. Stop assigning new tasks to datastore at:
C. Stop processing until the latency is lower than:
D. Throttle I/O of existing tasks at:

Answer: B,D

Question No : 21

Which requirements must be met in order to perform transaction log backups for a database on a Microsoft SQL Server with Veeam Backup & Replication? (Choose the 2 appropriate options.)

A. No other backup tool truncates the SQL server's log files.
B. The recovery model for the database must be set to Simple.
C. The database must have its log files on a separate VMDK.
D. The recovery model for the database must be set to Full or Bulk-Logged.

Answer: A,D

Question No : 22

Which compression level is used by VeeamZIP?

A. No compression is used
B. Always High
C. Compression is optional

D. Always extreme

E. Always Optimal

Answer: C

Reference: http://helpcenter.veeam.com/backup/80/free/vmware_performing_backup.html

Question No : 23

Which events in Veeam Backup & Replication can be configured for automatic email or general UI notifications? (choose the 4 appropriate options)

A. Low disk space at the repository

B. Veeam support contract expiration

C. Too many snapshots on the VM

D. A new Veeam Backup & Replication patch

E. Necessary updates for the Microsoft Hyper-V hosts and off-host backup proxies

F. Necessary updates for the VMware vSphere hosts and backup proxies

Answer: A,B,C,E

Question No : 24

When performing a SureBackup recovery verification, which tests will be skipped if Vmware Tools are not installed inside the VM?

A. Only application test

B. Only heartbeat test

C. Tests won't be skipped in any case

D. All tests will be skipped

E. Only heartbeat and application tests

F. Only ping and application tests

Answer: D
